Subject: Draft Regulations Dated Friday, February 11, 2011

Due to the complexity and uncertainty of in-field testing, I would suggest the following clarification to Measurement Using On-site, In-house or Existing Built Devices (options 2 and 3) on page 4 and 5 of the draft regulations:

2) Certification shall be determined through in-field testing or qualified analysis of an individual device or representative type of device or statistically representative sample of devices and performed by an entity or individual specified under 597.5.

3) Certification shall be determined through in-field testing or qualified analysis of an individual device or representative type of device or statistically representative sample of devices and performed by an entity or individual specified under 597.5.
